

1. Once a car is collected and Delivered. An Automatic POD and POC must go to the email address on the customer's account with both reports.
2. Please change the name of the current POC (Load) reports going to [accounts@eirtrans.ie](mailto:accounts@eirtrans.ie) & [customs@eirtrans.ie](mailto:customs@eirtrans.ie) to Load Reports and also add [collections@eirtrans.ie](mailto:collections@eirtrans.ie) so they also receive this report.
3. Please add multiple email addresses to be added to a customer's account. EG: x 5 so the POD;s and POC's can go to more than one when drivers collect and deliver.
4. Rate is missing from the POC (Load) Report email that was amended yesterday.
5. Please allow ability for Sonia in accounts to be able to highlight only the field in the main box of the load report email so she can copy and paste.
6. An x button must be added to all loads in the planner so the transport manager can remove cars and they must go back into cars for collection. This is a must as cars can not start etc and need to be removed from loads.
7. The PDF buttons are not working on the site -EG: In loads etc
8. In Job Reports when you click export file. This is showing a server error. Needs to export to excel etc.
9. The yellow color needs to be amended to a different shade as its impossible to read.
10. Search bar in customers is not working to search a customers name.
11. Main search bar wont search a customers name
12. Can you add a sent button once the transport manager submits shipping details so he knows its done. Its very difficult for him to keep track.
13. Please change load names to opposite order - show latest first.
14. Please stop all POD's and POC's reports going to [accounts@eirtrans.ie](mailto:accounts@eirtrans.ie) BUT ensure the LOAD REPORTS (New name) are still sent with updated format.
15. If you x a car from load builder a server error is showing up (Sometimes).
16. If you try and search for a car - we have lost some we need a way of seeing where it is in the system.  
Eg: In Planner  
In cars for Collection  
In cars for delivery  
In London Load etc.  
This should be viewed wherever the car is at that time when the reg is entered into the main search bar.
17. When a load is completed, ensure it's removed from the drivers app.
18. On the app - After the cars are collected. It is saying Cars Delivered button before they sign for the shipping details.  
They must sign for shipping details first and hit cars delivered when they arrive back to the yard.  
This is what is causing the issue of why no loads are being completed. (URGENT) Major
